

Vodafone has partnered with Trend Micro to launch the Vodafone Super Shield, an endpoint security suite for enterprise businesses. The solutions will assist in protection of critical business data from several threats including malware attacks, ransomware, spyware, phishing websites and data thefts.

The Super Shield is equipped with advanced features including USB port blocking, URL filtering and full disk encryption. The solution identifies and blocks threats before they can impact the device. With the Super Shield, users will receive real time updates on the cloud, thereby eliminating the need for servers to manage the deployment.

Further, the Vodafone Super Shield can protect devices across platforms and is designed to make enterprise grade security seamless and affordable. Moreover, customers can manage users and licenses online, grant and revoke access, and generate reports and dashboards.

The service is available on the Vodafone CloudStore for a price of Rs 99 and Rs 999 with a validity of a month and a year respectively.
